

SOIL

Neo Soil Shrimp

Soft, slightly acidic water for shrimp — and the plants around them.

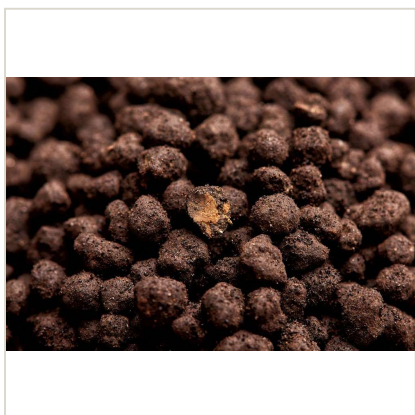

Neo Soil Shrimp keeps water soft and slightly acidic over the long term, the conditions Crystal Red Shrimp, most tropical fish and aquatic plants prefer. Rich, fully decomposed nutrition, humic acid and trace elements support baby shrimp survival and adult color and shell, while fine pores house beneficial bacteria and keep adsorbing pollutants.

Water quality after setup

	SOURCE	DAY 7	DAY 14	DAY 21
MG/L				
NH ₃ /NH ₄	0	0.25	0	0
NO ₂	0	0	0	0
NO ₃	0	12.5	12.5	12.5

Neo Soil Shrimp keeps water soft and slightly acidic — the conditions Crystal Red Shrimp, most tropical fish and aquatic plants prefer.

How to use

- 01 Never wash the soil.
- 02 Spread a thin layer, add Neo Plants Tab or other base fertilizer if needed, then fill the rest — low at the front, high at the back.
- 03 Lay the empty soil bag on the soil and pour water slowly over it.
- 04 Change 1/3 of the water every 3 days at first, then 1/3 once a week.

Cautions

- Aquatic plants also need CO₂ (Neo CO₂ or pressurized CO₂), proper light and fertilizer.
- When mixed with other soils, change water more often to prevent algae.
- Results vary with each tank's environment and care.

Specifications

TYPE	Shrimp soil
GRAIN SIZE	3 mm
PACKAGE	8 L
WATER	Soft, slightly acidic
RINSING	Do not wash
ORIGIN	Made in Korea
DISTRIBUTION	Exported to 33 countries

Specifications and appearance are subject to change without notice for product improvement.
